Overview

The Gardener, part of our 'Tin Hat' range, is an innovative new design which allows you to configure your own shed to the size best suited to your space and needs. Made from solid pressure treated timber with a 0.7mm galvanised sheet roof.

Shed Measurements

The Gardener

Each module

Max height:	8ft (2.4m)
Eaves height:	6ft (1.8m)
Width:	4ft 10in (1.4m)
Length:	3ft 6in (1.07m)
Roof angle:	20°
Door opening width:	1ft 11in (0.59m)
Door opening height:	5ft 2in (1.58m)

Shelving Unit

Width:	3ft 5in (1.04m)
Depth:	1ft 11in (0.58m)
Maximum height:	8ft (2.4m)

Floor

Tin Hat - Floor

Our 'Tin Hat' sheds come with a very solid, weatherproof 18mm exterior plywood with a coat of wood preservative on the top surface to give an extra layer of protection. This finished surface is fitted to 30mm pressure treated timber bearers.

The key to all outside buildings and the associated damp issues is to ensure that there is a good airflow under the shed. To this end the support beams built into the floor need to sit on a solid surface. There are many suitable surfaces, shingle, slabs, concrete, decking, tarmac to name but a few, these are what we call the sub base.

Walls

Built with a solid framework of pressure treated 38 x 50 Redwood timber fully finished with rounded corners and a smooth surface. The framework is screwed together rather than being nailed; this gives additional strength to the shed.

Pressure treated TGV jointed cladding is fixed to the outside using 38mm galvanised finish nails.

Roof

Tin Hat - Roof

The roof is heavy duty 0.7mm galvanised steel sheet with bolts and rubber washers to secure it. Black plastic 4-inch guttering is supplied as standard with run off to ground.

Colours

Unpainted

Pressure Treated Timber

Available in colours shown above.
